

# A programmable thermostat...

## does the thinking and saves you money!

✓ Why heat your home when you're sleeping or when nobody's there? A programmable thermostat regulates your home's temperature automatically.

✓ In winter, each degree above 68 degrees adds about 5% to your heating bill.

*Electricity is more valuable than ever.*

**Don't waste it.**

✓ In summer, cooling costs can be reduced by about 5% for every 2 degrees higher you set your thermostat.

Blue Ridge Electric Cooperative is committed to work with integrity and innovation to provide you with reliable power at the best possible price.
